About

I am an undergraduate student in Software and Computer Engineering at Ajou University, currently working as an AI Research Intern at INEEJI on AI agents that read weather charts for forecasters. I am interested in **AI agents**, **AI systems**, and **blockchain security**, and more broadly in building technology that people can trust. I also enjoy sharing what I learn and talking with others about it.

Education

Ajou University Mar 2023 – Present
B.S. in Software and Computer Engineering

Experience

AI Research Intern, INEEJI Sep 2026 – Present
Research Team 2 · AlphaWeather, an AI assistant for weather forecasters

- Improved weather-chart reading with color-separation and brightness preprocessing; raised observation-to-image location matching from 17% to 81.6%.
- Trained a CNN for temperature-value extraction (95.2% accuracy) and analyzed its bottlenecks; built and validated VLM training data for chart reading.
- Fine-tuned open-source Gemma in an air-gapped environment and experimented with tool calling, toward a single model that works across chart types (in progress).
- Designed and built a rubric-based VQA dataset to evaluate and improve generation accuracy.

Reporter, Financial Friends Apr 2026 – Present
Financial Services Commission (금융위원회)

- Producing 7 policy explainer videos for the FSC YouTube channel (ongoing), covering security tokens (STO), illegal crypto-asset operators, and single-stock leveraged products.

Member, Blockchain at Yonsei (BAY, 16th) Jul 2025 – Jun 2026
Development & Research Team

- Led crypto-monitoring sessions and studied DeFi/AML trends; developed smart contracts and joined hackathons.

Founder, Paletting Aug 2023 – Dec 2023
Values-based matching platform

- Designed a survey-driven matching algorithm and led a team of 4 across planning, design, and operations.
- Acquired 500+ users through social media marketing.

Selected Projects

집지기 (Jipjigi): An LLM Agent for Young Adults' Housing Decisions 2026
8th KB Future Finance AI Challenge, Excellence Award (Team 똘똘한 최)

- Built a Text-to-SQL RDB-RAG pipeline for listing search, improving retrieval accuracy from 70% to 96%.
- Designed a prior-lien deposit estimation model for jeonse-fraud risk, informed by interviews with 30 brokers and young tenants. [video] [news]

TRACE-X: Explainable AML Risk Scoring for Blockchain Addresses 2025
AJOU SOFTCON 2025-2 Research Track, Excellence Award (Team 말해뭐해)

- Designed a 28-rule compliance engine citing Korean AML law and FATF that explains each flag through triggered rules, reported alongside a 15-feature gradient-boosting score.
- Added compliance gating that raises a top-priority review signal on direct sanctions or mixer exposure.
- Held-out set (926 addresses): Accuracy 97.0%, Recall 90.9%, ROC-AUC 99.3%, PR-AUC 97.3%. [code] [video]

XAI-AML: Explainable Suspicious Transaction Detection 2025
AJOU SOFTCON 2025 SW Fundamentals Track, First Prize

- Built SHAP/LIME explanations over a LightGBM detector and automated template-based STR report generation. [code]

Honors & Awards

2026	Excellence Award, 8th KB Future Finance AI Challenge	KB Kookmin Bank
2025	Excellence Award, AJOU SOFTCON 2025-2 (Research Track)	Ajou University
2025	Award, Paran Semester Program (TRACE-X)	Ajou University
2025	First Prize, AJOU SOFTCON 2025 (SW Fundamentals)	Ajou University
2025	Excellence Award, 5th SW Convergence Startup Camp (Trusticket)	Kyung Hee University
2025	Selected, Student Startup 300+ Program (Trusticket)	Ministry of Education & MSIT
2024	4th Place, Future Library Policy Idea Hackathon	NIA

Skills

Proficient Python, C, C++, Java, Git

Experienced PyTorch, TensorFlow, Docker, JavaScript, Solidity
